

Alabama Commercial Plumbing Inspection Checklist

Here are the most critical items to review during your scheduled maintenance:

- ☐ Check for leaks in every sink, toilet, shower drain, and floor drain
- ☐ Inspect all drainage connections for corrosion, wear and tear, or damage
- ☐ Test water pressure, backflow prevention devices, and valves
- ☐ Evaluate grease trap and sump pump functionality
- ☐ Confirm proper operation of booster pump, septic tank, and sewer lines
- ☐ Look for signs of tree roots, shifting concrete, or damaged pipes
- ☐ Examine hot water heaters for signs of failure or leaks
- ☐ Review drain cleaning frequency and maintenance logs
- ☐ Ensure storm drain and roof drainage systems are clear
- ☐ Test for sewer gas and verify adequate ventilation
